

Grading Program 1

CS344 – Benjamin Brewster

This document details how to grade Program 1.

How to Get Student Submissions and Upload the Grades

Once you have finished grading the assignment, upload the score to Canvas in this manner:

- 1) Go to Canvas in your web browser of choice.
- 2) Click on Assignments on the left menu.
- 3) Click on Program 1 – matrices.
- 4) In the upper right corner, click on SpeedGrader.
- 5) Pick the name of the person you're grading, above. Note that you can use the left and right arrows, and the drop down list, to select between students.
- 6) Once you've chosen a person, check in the upper right that the LATEST version is selected. Read their comments below.
- 7) Download their file by clicking it in the list on the left, placing it onto os1 (where all grading is done). Follow the instructions below to assign a grade (in points).
- 8) In order to commit the grade to Canvas, come back to this assignment, and enter the point value in the Assessment field on the right, in the middle. Then:
 - a. If the student lost points, record the reasons why in the Add a Comment Field.
 - b. If the assignment was late by more than an hour past the due date, it will be marked as late. Please review the Syllabus late policy.

Once you have generated the final points value, adjust it downwards, if necessary, according to the late percentages given above.

How to run the Grading Tests

Here is the process:

- 1) Read through the specifications for the assignment on the Canvas website.
- 2) When you're ready to grade a student's version, download their LATEST submission to os1, rename it to "matrix" if Canvas renamed it, put it in the same directory as "p1gradingscript", and run it like this (substituting the student's ONID username in the second line), making sure you're in a bash shell on os1:

```
$ chmod +x matrix
$ p1gradingscript matrix > p1results.username
```

Background the This will put the test results into their own file called "p1results.username". You can then examine these results at your leisure to grade it. Look at each step of the student's run

of the script, and assign points as described in the results file.

Grading Criteria

There are a total of 160 points available for Program 1. My philosophy is that we should grade somewhat generously: give the student the benefit of the doubt, where possible. For comments, you should be seeing lots of them. They should describe where, and what, the student is doing. Grade generously, according to your best judgment. There are a total of 12 points available for comments.
